NETSUITE

Optimize Billing and Invoice Management

Every business needs strong financial reporting to succeed. Businesses with high-volume, recurring revenue or usage-based pricing tactics struggle to get the most out of their customer data and revenue metrics. Reporting for these complex business models presents unique challenges because information can remain locked in separate systems, such as CRMs, Billing Solutions, and ERPs.

BillingPlatform customers can seamlessly integrate their billing, invoicing, and payment data with their accounting and financial data through our certified connector built for NetSuite, the market's leading accounting and ERP solution. With this "Built for NetSuite" connector, you can efficiently manage your revenue flows using NetSuite's best-in-class, automated revenue recognition and financial reporting capabilities.

The screenshot displays the NetSuite BillingPlatform Integration interface. At the top, there is a search bar and user information for Alejandro Armelles. The main navigation bar includes tabs for Activities, BillingPlatform Integration, Box Files, Payments, Transactions, Lists, Reports, Analytics, Documents, Setup, and Customization. A dropdown menu is open under the BillingPlatform Integration tab, listing options: BillingPlatform Integration Overview, Integration Mapping Record, Integration Schedule, Integration Batch review, and Setup. Below the menu is a table with columns for NSRECORDID, ID, and RECORD LINK. The table contains several rows of data, including account test records and widget test records.

NSRECORDID	ID	RECORD LINK
5868	100220	NS Record Link
6003	65559	NS Record Link
6087	67160	NS Record Link
5856	100065	NS Record Link
5955	100064	NS Record Link
5953	100028	NS Record Link
5954	100030	NS Record Link
5853	100027	NS Record Link
5956	100066	NS Record Link
5865	100110	NS Record Link
5866	100175	NS Record Link

▶ Link data from BillingPlatform directly to your NetSuite instance.

The fully integrated BillingPlatform Built for NetSuite solution delivers the following benefits:

- ✓ **Close month-end processes more efficiently** by ensuring data consistency and accuracy between multiple financial applications
- ✓ **Accurately manage complex revenue streams** with NetSuite's revenue recognition engine
- ✓ **Automate data flow between BillingPlatform and NetSuite ERP** through scheduled or on-demand synchronization, such as payment data, contract changes, account updates, or renewals
- ✓ **Improve reporting capabilities across the financial ecosystem** by mapping BillingPlatform data fields directly in NetSuite
- ✓ **Eliminate multiple integration points** and deliver a single connected solution between the two systems
- ✓ **Future-proof business processes** by accommodating changes with easy-to-use point and click configuration

Seamless Data Transfer throughout Your Financial Ecosystem

BillingPlatform Built for NetSuite allows you to map critical fields from the billing solution directly from the NetSuite application. By establishing a one-for-one relationship for data within both systems, your business can easily schedule data transfers to ensure the accuracy and timeliness of your financial reporting.

EDIT	NETSUITE FIELD ID	BP FIELD NAME	DEFAULT VALUE	SUBSELECT OBJECT	NS SUBLIST	AGGREGATE FUNCTION	FIELD CHARACTER LIMIT	REMOVE

Edit	item		1008	tax_detail				Remove
Edit	quantity	Id		tax_detail				Remove
Edit	amount	Amount		tax_detail				Remove
Edit	id	NsRecordId						Remove

Support High Data Volumes

There are multiple business use cases that benefit from BillingPlatform's tight integration with NetSuite. For example, businesses with high volumes of user data often leverage usage-based pricing models. These consumption models can be highly successful for certain business types, such as networking and Infrastructure as a Service, however high volumes of data are often difficult to consume in revenue recognition tools.

With BillingPlatform's ability to handle high volumes of data, NetSuite can easily address these challenges.

The easy-to-use connector allows complex businesses to map their billing data directly into their ERP. By associating critical usage fields directly with the data model established within NetSuite, businesses with high usage volumes can be confident in their accounting data and end of month reporting.

Support Any Business Model with BillingPlatform

BillingPlatform delivers a complete, cloud-based solution that enables innovative pricing models, such as recurring revenue and more complex recurring plus usage-based pricing.

BillingPlatform also gives you total control of your financial processes. Customize every element of your billing function to support your company's unique products, services, and business models.
